

Are you still experiencing pain after a knee cartilage operation?

METEOR2 is a study for people who have had some meniscus (cushioning cartilage) removed from their knee, don't have diagnosed arthritis of the knee but still have pain more than 6 months afterwards.

1

Speak to your GP and get a referral to your nearest participating site.

2

Discuss the METEOR2 study with the local research team regarding your eligibility and treatment options.

3

Begin your participation and treatment pathway in METEOR2.

Your local participating site is: **Royal Devon & Exeter Hospitals**
